

What is claimed is:

1. A biochemical analysis unit, comprising:

i) a base plate, which has a plurality of holes,

and

5 ii) a porous adsorptive material, which is

filled in each of the plurality of the holes of the base
plate and forms each of a plurality of adsorptive regions,

wherein each of the adsorptive regions is provided
with a signal absorbing layer for absorbing a noise signal,
10 which will otherwise be detected from the adsorptive region.

2. A biochemical analysis unit as defined in
Claim 1 wherein the base plate is constituted of a material
having radiation attenuating properties and/or light
attenuating properties.

15 3. A biochemical analysis unit, comprising:

i) a base plate, which has a plurality of holes,

and

ii) a porous adsorptive material, which is

filled in each of the plurality of the holes of the base
20 plate and forms each of a plurality of adsorptive regions,

the porous adsorptive material, which
constitutes each of the adsorptive regions, being connected
with the porous adsorptive material, which constitutes an
adjacent adsorptive region, at one of surfaces of the base
25 plate,

wherein the biochemical analysis unit further comprises a signal absorbing layer for absorbing a signal, which passes through the porous adsorptive material that is connected at the one surface of the base plate, and which thus propagates from a certain hole of the base plate toward an adjacent hole of the base plate.

4. A biochemical analysis unit as defined in Claim 3 wherein the signal absorbing layer is formed at only an area of a continuous region of the porous adsorptive material that is connected at the one surface of the base plate, which area is located just under the base plate and is other than the areas of the adsorptive regions formed in the holes of the base plate.

5. A biochemical analysis unit as defined in Claim 3 wherein the signal absorbing layer is formed at only an area, which is located just under each of the adsorptive regions formed in the holes of the base plate.

6. A biochemical analysis unit as defined in Claim 3 wherein the signal absorbing layer is formed over an entire area of a continuous region of the porous adsorptive material that is connected at the one surface of the base plate.

7. A biochemical analysis unit as defined in Claim 3 wherein the base plate is constituted of a material having radiation attenuating properties and/or light

attenuating properties.

8. A biochemical analysis unit as defined in Claim 4 wherein the base plate is constituted of a material having radiation attenuating properties and/or light attenuating properties.

9. A biochemical analysis unit as defined in Claim 5 wherein the base plate is constituted of a material having radiation attenuating properties and/or light attenuating properties.

10. A biochemical analysis unit as defined in Claim 6 wherein the base plate is constituted of a material having radiation attenuating properties and/or light attenuating properties.
